

Adobe Photoshop CC–Level 2

COURSE OVERVIEW

Adobe Photoshop CC – Level 2 is an advanced training program designed to build upon foundational Photoshop skills and enhance participants' proficiency in creating professional-grade graphics and images. This course delves into more complex topics such as advanced layer techniques, masks, channels, vector graphics, smart objects, typography, and image compositing. Participants will also explore non-destructive editing, color correction, automation tools, and preparing images for various outputs, including web, print, and digital platforms. By the end of the training, participants will be able to efficiently utilize advanced Photoshop features to produce sophisticated and visually stunning designs.

WHO SHOULD ATTEND?

As an advanced course, it is designed for graphic designers, photographers, visual artists, marketing professionals, web designers, and creative professionals who already have a basic understanding of Photoshop and want to advance their skills. In addition, architects, engineers, project managers, contractors, interior designers, and architectural professionals will find this advanced level of Adobe PS valuable, as they look to enhance their expertise in creating high-quality graphics, complex image editing, digital compositing, and preparing visuals for various platforms. This training is also suitable for individuals aiming to refine their skills for professional projects or certification purposes.

COURSE OUTCOMES

Delegates will gain the skills and knowledge to:

- Use brushes, gradients, and tool presets to create raster images.
- Apply vector paths, shape drawing tools, type, and type special effects.
- Apply advanced layer techniques with masks, filters, layers, and smart objects.
- Apply actions and batch processing to automate tasks.
- Edit video by using timelines, transitions, graphics, titles, and animation.
- Set project requirements by identifying the purpose, audience, copyright rules, and project management tasks.

KEY COURSE HIGHLIGHTS

At the end of the course, you will understand;

- Advanced layer and masking techniques.
- Working with channels and vector graphics.
- Utilizing smart objects and non-destructive editing.
- Image compositing and advanced color correction.
- Typography and design layout principles.
- Using automation tools to streamline workflow.
- Preparing images for web, print, and digital platforms.
- Creating high-quality, professional-grade designs.

All our courses are dual-certificate courses. At the end of the training, the delegates will receive two certificates.

1. A GTC end-of-course certificate
2. Continuing Professional Development (CPD) Certificate of completion with earned credits awarded
