# EC-Council Certified Chief Information Security Officer (CCISO)

## COURSE OVERVIEW
EC-Council's CCISO Program is designed by top information security executives to train and certify future CISOs. Developed with input from the CCISO Advisory Board, the program covers critical knowledge areas through contributions in authorship, exam design, and training. It emphasizes executive-level application of security management, focusing not just on technical skills but also strategic leadership, making it the first certification program tailored specifically for current and aspiring CISOs.

## WHO SHOULD ATTEND?
This course is designed for the aspiring or sitting upper-level manager striving to advance his or her career by learning to apply their existing deep technical knowledge to business problems.

## COURSE OUTCOMES
Delegates will gain the skills and knowledge to understand the 5 CCISCO Domains as highlighted below;
- Domain 1: Governance, Risk, Compliance
- Domain 2: Information Security Controls and Audit Management
- Domain 3: Security Program Management & Operations
- Domain 4: Information Security Core Competencies
- Domain 5: Strategic Planning, Finance, Procurement, and Third-Party Management

## KEY COURSE HIGHLIGHTS
At the end of the course, you will understand;
- Focus on executive-level information security management.
- Development by experienced CISOs and industry experts.
- Governance, risk management, controls, and compliance.
- Emphasis on strategic planning and financial management in cybersecurity.
- Real-world scenarios and case studies.
- How to prepare for the CCISO certification exam.
- The gap between technical expertise and executive leadership and how to bridge it.

All our courses are dual-certificate courses. At the end of the training, the delegates will receive two certificates.
1. A GTC end-of-course certificate
2. Continuing Professional Development (CPD) Certificate of completion with earned credits awarded
