UX200- SAP Fiori – System Administration

COURSE OVERVIEW

The UX200 – SAP Fiori – System Administration course provides an in-depth understanding of the administration and configuration of SAP Fiori applications. It covers key topics such as system architecture, user interface configuration, and backend integration to ensure the optimal performance and usability of SAP Fiori apps. Participants will learn how to manage security settings, troubleshoot issues, and ensure smooth operation of the SAP Fiori environment. This course is essential for IT professionals and system administrators seeking to effectively manage SAP Fiori systems and ensure seamless user experiences across enterprise applications.

WHO SHOULD ATTEND?

The course is designed for SAP system administrators, IT professionals, SAP Fiori consultants, technical support teams, SAP architects, system integrators, and anyone interested in learning how to manage, configure, and troubleshoot SAP Fiori applications. It is ideal for those responsible for overseeing the implementation, performance optimization, and maintenance of SAP Fiori systems, as well as professionals looking to enhance their expertise in integrating SAP Fiori with other SAP solutions like SAP S/4HANA.

COURSE OUTCOMES

Delegates will gain the skills and knowledge to:

- Understand the structure of SAP Fiori and how front-end and back-end components interact within the system.
- Configure and deploy SAP Fiori applications to meet business needs and ensure functionality.
- Set up user roles, permissions, and security protocols to maintain secure access and compliance.
- Diagnose and resolve issues to ensure optimal performance of SAP Fiori applications.
- Monitor and optimize the performance of SAP Fiori apps for improved user experience and responsiveness.
- Integrate SAP Fiori with other SAP systems, such as SAP S/4HANA, for smooth data exchange.
- Monitor system health and apply necessary upgrades to maintain SAP Fiori's performance and security.

KEY COURSE HIGHLIGHTS

At the end of the course, you will understand;

- SAP Fiori system architecture and component interaction.
- Configuration and deployment of SAP Fiori applications.
- Management of user roles, permissions, and security settings.
- Troubleshooting and issue resolution for SAP Fiori apps.
- Performance monitoring and optimization techniques for SAP Fiori.
- Integration of SAP Fiori with backend systems like SAP S/4HANA.
- System monitoring and application of upgrades for SAP Fiori.

All our courses are dual-certificate courses. At the end of the training, the delegates will receive two certificates.
1. A GTC end-of-course certificate
2. Continuing Professional Development (CPD) Certificate of completion with earned credits awarded
