ESG-Driven IT Governance & Compliance

COURSE OVERVIEW

This course provides a description of how Environmental, Social, and Governance (ESG) principles can be integrated into IT governance frameworks to ensure responsible, sustainable, and compliant technology management. It explores the intersection of ESG and IT, covering areas such as ethical data management, energy-efficient infrastructure, regulatory compliance, risk management, stakeholder accountability, and transparent reporting. The curriculum emphasizes aligning IT strategy with organizational ESG goals, leveraging technology for sustainability, and ensuring adherence to international compliance standards. Through real-world case studies, best practices, and project-based learning, Delegates will gain the expertise to implement IT governance models that promote trust, resilience, and long-term value creation in the digital economy.

WHO SHOULD ATTEND?

This course is designed for CIOs, IT professionals, compliance officers, governance professionals, risk managers, ESG consultants, and business leaders seeking to integrate ESG principles into technology governance. It is also valuable for policy advisors, auditors, and professionals transitioning into IT governance or ESG-focused roles who aspire to strengthen their understanding of sustainable and compliant technology management.

COURSE OUTCOMES

Delegates will gain the skills and knowledge to:

- Understand the role of ESG in IT governance and compliance frameworks.
- Align IT policies with organizational sustainability and ethical goals.
- Implement risk management and compliance strategies in IT operations.
- Ensure data privacy, security, and ethical technology use.
- Optimize IT infrastructure for energy efficiency and reduced carbon impact.
- Establish transparent reporting and accountability practices.
- Integrate ESG-driven governance into digital transformation strategies.
- Contribute to organizational resilience and stakeholder trust through ESG-focused IT practices.

KEY COURSE HIGHLIGHTS

At the end of the course, you will understand;

- The exploration of ESG principles in IT governance and compliance.
- Practical training in risk management, auditing, and regulatory frameworks.
- Case studies of organizations applying ESG in IT strategy.
- Strategies for sustainable infrastructure and energy efficiency.
- Ethical data management and privacy compliance.
- Tools for transparent reporting and accountability.
- Best practices for integrating ESG goals into IT governance models.
- Developing an ESG-driven IT governance and compliance framework for an organization.

All our courses are dual-certificate courses. At the end of the training, the delegates will receive two certificates.
1. A GTC end-of-course certificate.
2. Continuing Professional Development (CPD) Certificate of completion with earned credits awarded.
