

# Energy Policy, Incentives & Regulatory Risk Management

## COURSE OVERVIEW

This course offers a description of how incentives, subsidies, carbon pricing, and renewable energy mandates shape investment decisions, influence market competition, and drive innovation in both conventional and renewable energy sectors. It has been tailored to provide participants with an in depth understanding of the evolving energy landscape, focusing on the critical interplay between government policies, regulatory frameworks, and market dynamics. Participants will learn to analyze policy frameworks, leverage financial incentives, and develop robust strategies to manage regulatory uncertainty in energy investments and project development.

## WHO SHOULD ATTEND?

This course is designed for policymakers, regulators, energy executives, project developers, financial analysts, risk managers, consultants, and decision makers working in oil and gas, power, and renewable energy sectors. It is also suitable for professionals in finance, law, and consulting who advise on energy projects, and researchers seeking applied knowledge on the intersection of policy, regulation, and risk management in the global energy industry.

## COURSE OUTCOMES

Delegates will gain the skills and knowledge to:

- Analyze the impact of energy policies and incentives on investment, project development, and market operations.
- Identify and evaluate regulatory risks across energy value chains.
- Develop strategies to mitigate policy and regulatory uncertainties in diverse energy markets.
- Assess the role of international agreements and geopolitical influences on national energy frameworks.
- Apply risk management tools to align corporate strategies with policy and regulatory trends.

## KEY COURSE HIGHLIGHTS

At the end of the course, you will understand:

- How to analyze and navigate diverse energy policy frameworks and regulatory environments.
- The design and impact of major renewable energy incentives and subsidy mechanisms.
- Methods for identifying, assessing, and quantifying regulatory risks in energy investments.
- Strategies for developing effective regulatory risk mitigation and management plans.
- The interplay between climate policy, energy security, and market design.
- How to engage with stakeholders and shape policy development processes.
- Best practices for compliance and reporting across multiple regulatory jurisdictions.

All our courses are dual-certificate courses. At the end of the training, the delegates will receive two certificates.

1. A GTC end-of-course certificate
2. Continuing Professional Development (CPD) Certificate of completion with earned credits awarded
