

# Public-Private Partnerships (PPP) for Clean Energy Infrastructure

## COURSE OVERVIEW

The Public-Private Partnerships (PPP) for Clean Energy Infrastructure course provides participants with a practical understanding of how governments, private sector investors, and development partners can collaborate to finance, develop, and operate sustainable energy projects. It explores the role of PPP frameworks in driving the transition to clean energy, with emphasis on renewable energy generation, transmission systems, and innovative technologies. Participants will learn to structure viable PPP arrangements that balance public policy objectives with private sector investment requirements across renewable energy, grid modernization, and clean technology deployment.

## WHO SHOULD ATTEND?

This course is designed for policymakers, government officials, regulators, infrastructure planners, project managers, private sector developers, financial institutions, and international development professionals who are involved in the planning, financing, or execution of clean energy projects. It is also highly relevant to professionals seeking to understand how PPPs can be leveraged to address the challenges of energy access, climate change, and sustainable infrastructure development.

## COURSE OUTCOMES

Delegates will gain the skills and knowledge to:

- Understand the principles, frameworks, and structures of PPPs in clean energy infrastructure.
- Identify key risks, mitigation strategies, and bankability considerations in renewable energy PPP projects.
- Analyze global best practices and case studies in structuring successful clean energy PPPs.
- Develop strategies for stakeholder engagement, negotiation, and governance in PPP projects.
- Apply practical tools for designing, implementing, and monitoring PPPs that support clean energy transitions.

## KEY COURSE HIGHLIGHTS

At the end of the course, you will understand:

- How to design effective PPP frameworks specifically for clean energy infrastructure.
- Methods for structuring balanced risk-sharing between public and private partners.
- The procurement and competitive bidding processes for PPP projects.
- How to develop bankable project agreements and contractual documentation.
- Strategies for managing stakeholder engagement and community benefits.
- Techniques for monitoring and evaluating PPP performance throughout the project lifecycle.
- Best practices for ensuring value for money while protecting public interests.

All our courses are dual-certificate courses. At the end of the training, the delegates will receive two certificates.

1. A GTC end-of-course certificate
2. Continuing Professional Development (CPD) Certificate of completion with earned credits awarded
