Oil & Gas Geological Consultancy Solutions

GTC Energy provides specialised geological consulting services to support clients across the upstream value chain. Our portfolio includes Core Description, Geological Field Seminars, and advanced subsurface analysis designed to improve reservoir understanding and optimise exploration and development decisions.

Our core-description service is renowned for its precision, speed, and cost efficiency. Instead of transporting core samples to distant laboratories, our expert geologists come directly to you - reducing turnaround time, minimising logistics costs, and ensuring secure, on-site evaluation.

Why Choose GTC for Geological Consulting?

► Expertise across Conventional and Unconventional Reservoirs

Our geoscientists bring deep experience in analysing diverse reservoir types, enabling accurate interpretation and high-quality geological insights.

► Comprehensive, High-Resolution Core Reports

We produce detailed, structured reports that support reservoir characterisation, field development planning, and technical decision-making.

► Digital Core-Data Archiving

All extracted data is captured in digital formats, creating a permanent, high-quality archive for future reference, integration, and modelling.

► Accurate Core Shift for Well Logs

Through careful calibration and alignment, we ensure a precise match between core data and wireline logs—improving subsurface models and reducing uncertainty.

► Integrated Reservoir Characterisation

From lithofacies identification to bioturbation analysis and fracture evaluation, our integrated workflows provide a holistic understanding of reservoir quality and heterogeneity.

► Cost-Effective, On-Time Delivery

We deliver world-class geological services efficiently and reliably, reducing downtime and empowering your teams with timely, actionable insights.

GTC Energy

Sedimentology

We provide detailed sedimentological descriptions that include grain size analysis, sedimentary structures, trace fossils, and facies interpretation. Beyond graphical representation, our reports deliver clear insights into depositional processes and the palaeoenvironment, supporting more accurate reservoir prediction and geological modelling.

Sequence Stratigraphy (Cycles)

Using biostratigraphic or regional stratigraphic markers, we identify key sequence boundaries, maximum flooding surfaces, and stratigraphic cycles. These can be integrated directly into the core description or correlated with well logs and seismic data.

Our approach improves understanding of reservoir architecture, stratigraphic trapping mechanisms, and lateral variability, enabling more confident development planning.

Bioturbation Index

The bioturbation index (BI) reflects the degree of sediment disturbance caused by organism activity. By analysing ichnofabrics within your core, we determine the BI and assess its impact on porosity, permeability, and reservoir quality. This interpretation strengthens reservoir characterisation and supports improved flow modelling.

Porosity - Permeability & Saturation Data

Where required, we integrate porosity-permeability data and saturation profiles to visually and quantitatively demonstrate the relationships between rock properties, lithofacies, and reservoir performance.

This helps operators assess reservoir heterogeneity and supports more accurate petrophysical interpretation.

Fractures

Our fracture analysis covers fracture type, aperture, intensity, mineral fill, and orientation. We also determine the prevailing stress regime and its implications for production.

After documenting the fracture network, we provide calibrated core-to-log fracture models, improving wellbore stability understanding and supporting reservoir stimulation decisions. Where fractures significantly influence production, we work with your team to identify optimal development strategies and potential recovery enhancements.

Integrated Geological Solutions

GTC Energy goes beyond routine description to help clients diagnose and solve complex subsurface challenges.

Our specialists support problems related to:

- Reservoir heterogeneity
- Sedimentological complexity
- Fracture networks
- Diagenetic overprints
- Depositional uncertainties

We are committed to delivering high-quality, actionable geological insight—and we stand behind the excellence of our work.

Our Methodology

GTC applies a proven methodology that helps organisations achieve sustainable transformation by unlocking the full potential of their human, technical, and intellectual resources.

Our approach is practical, evidence-driven, and built around the realities of how people and institutions make decisions and implement change.

1. Insight:

Solving problems requires accurate and meaningful information

Every successful intervention begins with clarity. Many challenges are rooted in assumptions, incomplete data, or insights that remain unspoken. GTC works with your teams to uncover the information that truly matters - clarifying root causes, mapping constraints, and revealing the drivers that shape performance. This insight becomes the foundation for effective decision-making and sustainable results.

2. Choice:

Good decisions require freedom, ownership, and informed options

Decision-making is not simply about choosing a path - it's about understanding the implications of each option. GTC supports your leadership in exploring alternatives, evaluating trade-offs, and selecting solutions that reflect your organisation's priorities. Our role is to guide, advise, and strengthen your decision-making capacity so that final choices are informed, practical, and fully owned by your institution.

3. Commitment:

Effective implementation depends on people who are ready and able to drive change

Transformation succeeds only when people commit to the journey. We help organisations build the engagement, capability, and confidence required to implement solutions and sustain improvements over time. By aligning expectations, strengthening ownership, and supporting change champions, GTC ensures that implementation is not just delivered - but embraced.

Our Philosophy

At GTC Consulting, our strength lies in the way we work. For more than a decade, we've built a reputation for professionalism, deep expertise, and a commitment to understanding the real challenges our clients face.

Collaboration is the key to progress. We partner with organisations, not just advise them - ensuring solutions are practical, owned, and sustainable.

Our Four Core Assets

Collaboration is the key to progress. We partner with organisations, not just advise them - ensuring solutions are practical, owned, and sustainable.

► Local Knowledge

We begin with the people who know the context best. Our consultants take time to understand your environment - your culture, values, systems, and the challenges you face. This insight ensures every solution is grounded in local realities and designed for lasting impact.

► Expertise

Knowledge has the greatest value when it is wisely applied. GTC brings together leading experts with both practical and intellectual depth, supported by extensive research and commercial experience. Our clients benefit from the highest standards of professional insight and technical capability.

► Innovation

New ideas often emerge from unexpected places. We believe innovation is not reserved for any one sector or geography. GTC continually seeks fresh perspectives, creative approaches, and emerging practices - ensuring our clients stay ahead in a rapidly changing world.

► Global Experience

Local understanding, strengthened by global perspective. We work across multiple regions with senior public- and private-sector leaders, combining international best practice with local knowledge. This blend allows us to offer solutions that are globally informed and locally effective.
